

Direct access to intranet, internet, e-mail and much more: The KALEO is a powerful webpad that supports your workforce in many communication, data transmission and information tasks and thus eases the daily work.

Optimize your service, quality and efficiency.

KALEO *airport applications*

Ground Services

Employees working on the ramp have direct access to time-critical data, flight and maintenance schedules. Wireless connection to the airport server allows for data sets to be read, modified or created in real-time. Consequently, loading and unloading of airplanes as well as additional services for the airlines can be handled in less time and shorter intervals.

Aircraft Maintenance & Facility Management

Using electronic check lists, the inspection of airplanes, vehicles and buildings can be done faster and more efficiently. Charts, circuit diagrams, blueprints and other information needed by the technician are either locally saved on the KALEO or can be accessed via WLAN.

Queue Busting

Due to unforeseen incidents in the daily work at airport terminals queues may emerge. The mobile KALEO enables the counter staff for example to attend upon a customer directly and to immediately dissolve the queue at the check-in counter. Customer satisfaction can be highly increased by such »mobile service teams«.

Luggage

Luggage can be allocated directly and faster by using KALEO together with its accessories, such as barcode or RFID scanners.

Vehicle Positioning

Dollies, trailers, containers etc. can easily get out of sight in the huge airport areas. Using the KALEO's Car Cradle inside airport vehicles assists in locating these lost units via GPS.

The computer that improves your service: small, lightweight, flexible. With the airport kit, the KALEO is handy at all times. Materials and colors comply with aviation security standards.

« Service

Quality for your customers. Quality for your workforce. The KALEO allows for improved quality assurance according to ISO 9000.

« Quality

The KALEO optimizes work processes, allows for paperless documentation and thus helps saving time and consequently increases efficiency.
